At Work For You

HÜNNNEBECK 
BY BRAND SAFWAY

Huennebeck services

The Huennebeck Group is one of the leading international suppliers of formwork, scaffolding and safety systems. Our solutions are used in commercial building construction, industrial and residential construction and infrastructure projects – including in the area of transport, energy and hydraulic engineering.

Since 1929, we have been focussing on making construction sites more productive and safer. The issue of sustainability is also becoming increasingly important. Our aim is to conserve resources and keep the impact on the environment as low as possible. To this end, we are continuously developing the products and services in our Ratingen competence centre.

Both local and internationally operating construction companies rely on Huennebeck as a partner for the planning and implementation of their construction projects. We place a special focus on occupational health and safety: human beings and the protection of their integrity are key. This applies equally to customers, business partners, suppliers and our own employees.

Huennebeck's core business is the development, sale and leasing of formwork, scaffolding and safety systems. These are offered in combination with a wide range of services.

The latter in particular – Huennebeck services – has been consistently expanded in recent years in order to meet increasing customer requirements in terms of flexibility, process optimisation and cost-effectiveness.

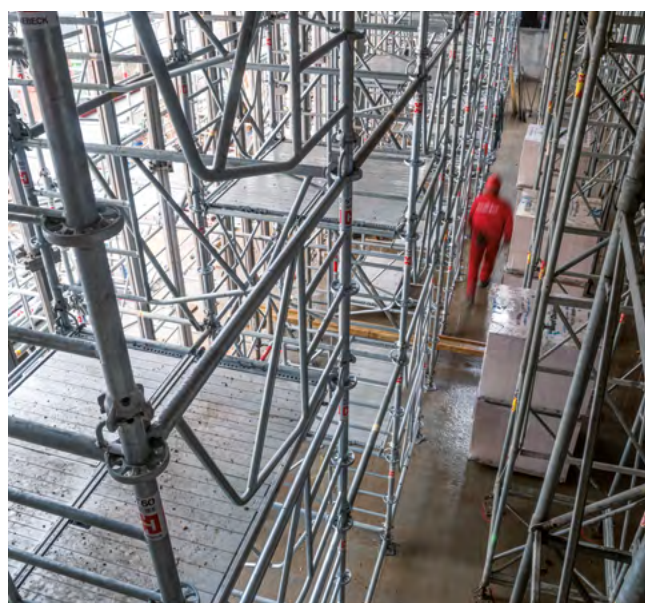

With Huennebeck services, we support our customers during all phases of the construction project: from technical planning, logistics, cleaning & repair, user training and formwork foreman service to comprehensive site support and site controlling.

► You will find a detailed overview of Huennebeck services and the benefits they offer you on the following pages.

Huenebeck rental service

Custom-fit formwork and access solutions for a wide variety of construction projects, while at the same time being economical: Huenebeck helps to meet this demand with its extensive rental fleet. Almost all systems are therefore available for rent or purchase.

The Huenebeck rental service consists of the following services:

Huenebeck service

Your benefits

► One-time setup of the rental contract (basic costs)

- Technical advice during the offer phase
- Logistical handling of transport from the Huenebeck warehouse to the construction site and back – including material planning, storage and retrieval, quantity and quality controls
- Commercial processing during the order phase

- Selection of the corresponding project-specific solution for your construction project
- Receipt of guide prices and system sketches

► Monthly rent

- Provision of equipment for the contractually agreed rental period
- Provision of rental equipment, manufactured at least according to British standards
- Replacement of form lining in the event of wear (resulting from proper use)
- Continuous quality assurance – ensuring the equipment is within our recommended rental criteria

- Access to the extensive European Huenebeck rental fleet which suits almost any type of application
- Short delivery times, even for large quantities of material

- Use of quality-tested material from the original manufacturer

- Operation of the rental logistics locations

- Saving of own storage space and operating expenses
- Saving of personnel in the areas of storage, quality assurance, material cleaning and repair

- Financing and depreciation of rental equipment

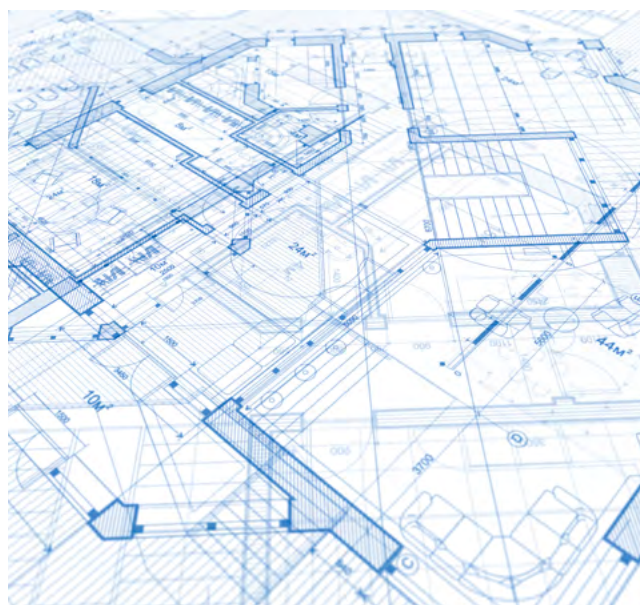

- Reduced capital and financing requirements, as no own portfolio needs to be built up
- No interest costs

- Assumption of capacity utilisation risk

- No investment risks

Huenebeck engineering service

Economically successful and, at the same time, safe construction projects begin as early as the planning phase. Our formwork and scaffolding experts provide you with professional support right from the start. For this purpose, Huenebeck has a large international team of civil engineers, construction technicians and structural engineers. They cover a comprehensive range of applications – from small and medium-sized construction sites to large-scale projects planned and technically supported for customers all over the world.

The Huenebeck engineering service consists of the following services:

Huenebeck service

Your benefits

- Professional technical planning of formwork and scaffolding projects as well as of complex engineering applications, e.g. for infrastructure or high-rise construction projects

- Access to Huenebeck's pool of experts with specialists for a wide range of applications

- Creation of formwork plans for all levels of complexity, incl.
 - General arrangement drawings
 - Detailed displays (as required)
 - Representation of views such as joint and anchor pattern (as required)

- Fast processing of inquiries, even with complex requirements and unusual geometries
- Reduced resource requirements in work preparation

- Provision of 3-D-models (as required)

- Visualisation of complex formwork solutions

- Provision of formwork plans in the myHuenebeck customer portal

- Digital access to all formwork plans with PC, Tablet PC or Smartphone

- Determination of material required

- Just-in-time access to the right materials to avoid delays and idle times

- Provision of technical data sheets and product brochures

- Short induction period of site personnel, higher safety and productivity

Other services (as required):

- Determination of quantities
- Construction sequence and cycle planning
- Estimated schedules
- Detailed schedules
- Determination of commissioning quantities and of rental periods
- Provision of tender specifications
- Structural calculations
- Provision of verifiable structural engineering

- Efficiency gains through optimisation of construction processes and construction times
- Greater transparency and planning reliability

- Provision of data models in BIM

- Clash detection and transparency regarding quantities and weights

Huenebeck construction site monitoring & controlling

Especially for large and complex construction projects, Huenebeck provides construction site monitoring and controlling valuable support. This is because it helps to detect deviations between planned and actual figures at an early stage and to identify potential for improvement.

The Huenebeck service in the area of construction site monitoring and controlling consists of the following services:

Huenebeck service

- Construction site supervision by an experienced Huenebeck project manager incl.
 - Proposals for process improvements
 - Proposals for speeding up the construction process
 - Proposals for increasing productivity
- Comparison of planned/actual data

Your benefits

- ▶ Increased productivity through optimised use of resources and through optimised processes
- ▶ Cost transparency thanks to ongoing site controlling

Huenebeck transport service

Functioning logistics are indispensable for smooth construction site operations. Huenebeck organises the professional transport of rental equipment to the construction site as well as the return transport of material that is no longer required.

The Huenebeck transport service consists of the following services:

Huenebeck service

Your benefits

- Planning of the transportation (determination of freight space, route planning, selection of the suitable transport partner and vehicle)

- ▶ Freight-optimised transport at reasonable costs

- Transport with specialist forwarding agents from the Huenebeck warehouse to the construction site

- ▶ Delivery and return delivery on the agreed date with minimum effort on the part of the customer

- Return transport from the construction site to the Huenebeck warehouse

- ▶ Lower freight costs thanks to access to Huenebeck key account discounts

- Professional loading of material and safe transportation of goods

- ▶ Improved safety at work and fewer risks in the loading and transport process

- Provision of transport solutions

- ▶ Safe transport of equipment on the construction site

Huenebeck cleaning and repair service

Rapid construction progress requires the use of professionally cleaned and maintained equipment. This applies in particular to formwork that is exposed to extreme everyday conditions on the construction site. At the same time, it must be ensured that a high-quality concrete image can be created with them.

The Huenebeck cleaning and repair service consists of the following services:

Huenebeck service

Your benefits

- Cleaning of formwork frames and form lining using state-of-the-art equipment and in accordance with British standards
- When required – we offer a full professional repair service, including assessment of material in accordance to our rental criteria. Our facilities are able to professionally repair all form lining – weld and assemble with original Huenebeck parts

- ▶ Access to formwork material ready for immediate use
- ▶ Repair with spare parts from the original manufacturer

- Cleaning & repair of rental formwork as well as of customer's own material

- ▶ Saving for own cleaning and repair facilities utilising specialist machinery and skilled workers to deliver exceptional results in a timely manner

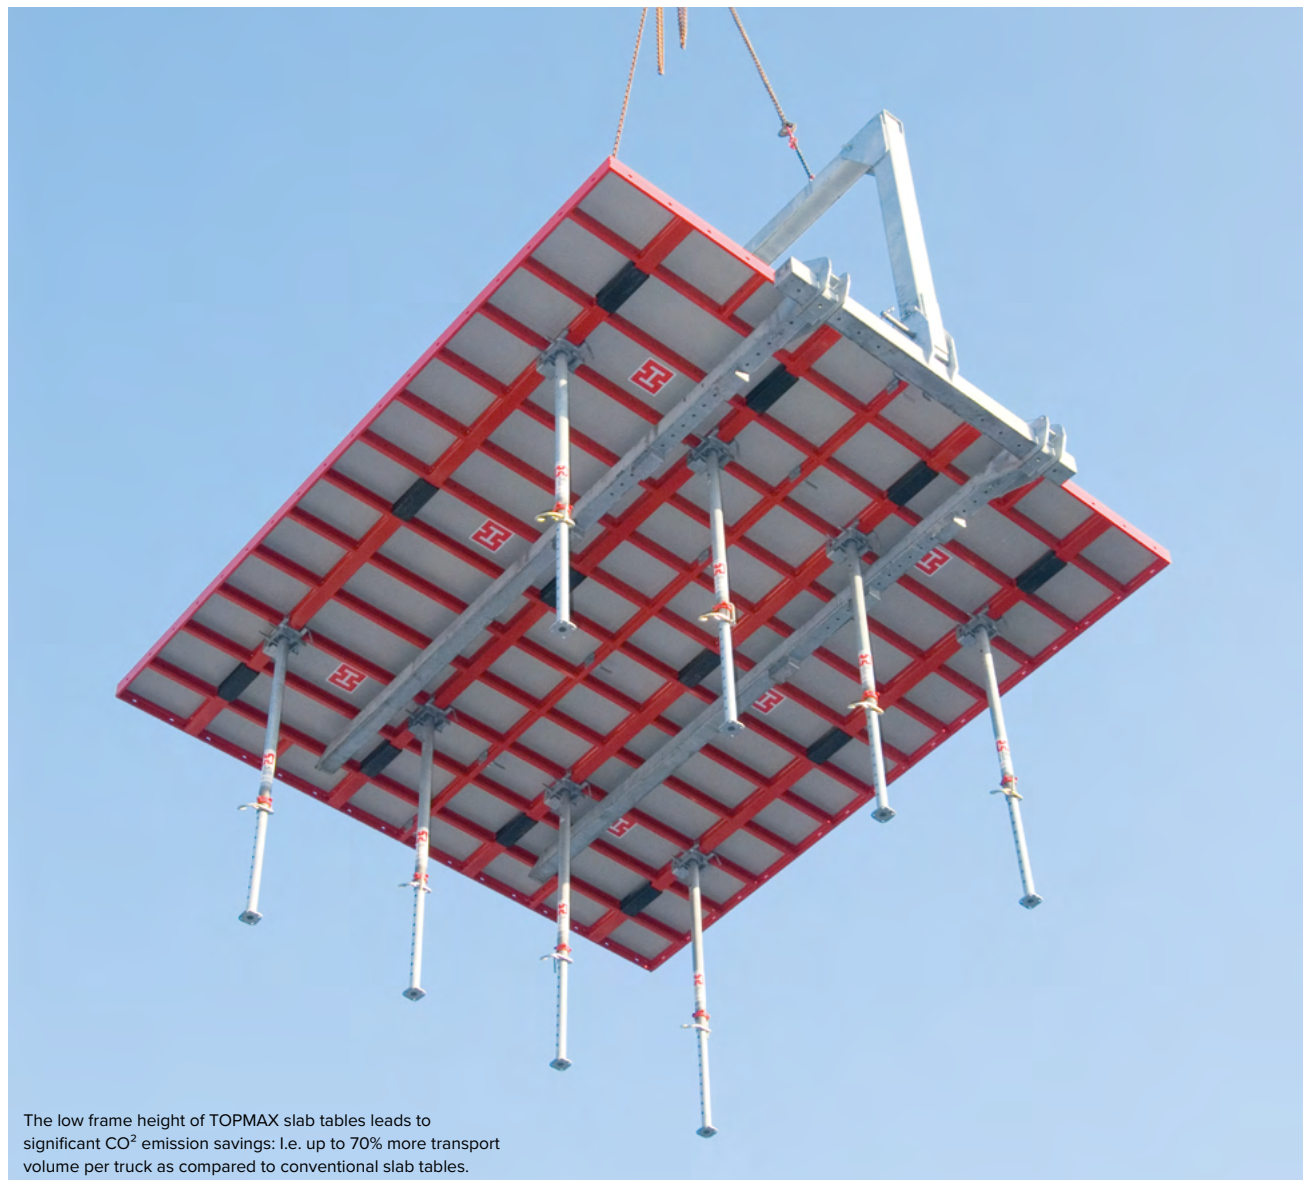

- Transparent invoicing model with flat rates

- ▶ Cost security through clear definition of the services included and contractually binding invoicing

Huenebeck environmental service

Increasing environmental regulations and sustainability requirements are already having an impact on numerous activities related to the construction process. The allocation of contracts is also increasingly linked to sustainability criteria. With Huenebeck's environmental service we ensure that environmental regulations are implemented correctly.

The low frame height of TOPMAX slab tables leads to significant CO₂ emission savings: i.e. up to 70% more transport volume per truck as compared to conventional slab tables.

The Huenebeck environmental service consists of the following services:

Huenebeck service

- Professional wastewater collection and preparation in our cleaning and repair facilities
- Professional recovery and recycling of valuable materials
- Proper disposal of residual materials and hazardous waste (e.g. multi-glued plywood)
- Use of the latest generation of EURO 6 trucks in the transport sector and optimal route planning

Your benefits

- ▶ Contribution to our own sustainability through cooperation with partners and suppliers acting in a sustainable manner
- ▶ Process reliability with regard to compliance with applicable legal regulations
- ▶ Sustainability and reduction of carbon dioxide emissions in transportation

Our contributions to resource conservation:

Huenebeck project support service

Expert instruction in the formwork and scaffolding systems has many advantages: It increases safety for all parties involved and contributes to rapid construction progress by utilising all system advantages.

Huenebeck project support service consists of the following services:

Huenebeck service

Your benefits

- Construction site supervision by experienced Huenebeck formwork team members
- Safety instruction for the products
- Information on the optimum handling and use of formwork and scaffolding systems and technical aids (e.g. lifting devices)
- Explanation of plans and material lists

▶ On-the-job product demonstration for construction site personnel

▶ Improved safety thanks to correct product application

▶ Short induction periods

▶ Increased productivity thanks to exploiting product advantages

Huenebeck seminar service

The Huenebeck seminars are aimed at a wide range of target groups, providing them with individual training tailored to their needs: from user training for standard and new products to training for special applications and knowledge transfer for new standards and legislation.

The Huenebeck seminar service consists of the following services:

Huenebeck service

- Seminars in formwork, scaffolding and safety engineering
 - For site managers, work planners and calculators
 - For foremen and formwork makers
 - For scaffolders
- Customised training
 - On the building site
 - At the customer's premises
 - At Huenebeck's premises

Your benefits

- ▶ Up-to-date employee knowledge about new products and how to handle them
- ▶ Improved safety thanks to correct product application
- ▶ Information about new and amended standards
- ▶ Flexibility regarding the choice of topics, time and place of training
